Acoustical Signal Processing in the Central Auditory System

By Syka, Josef

Book Condition: New. Publisher/Verlag: Springer, Berlin | Proceedings of an international symposium held in Prague, Czech Republic, September 4-7, 1996 | The symposium on Acoustical Signal Processing in the Central Auditory System which was held in Prague on September 4--7, 1996 was the third in a series organized in Prague, after the Neuronal Mechanisms of Hearing symposium in 1980 and Auditory Pathway - Structure and Function symposium in 1987. Approximately 100 scientists registered for the symposium and presented 82 separate papers and posters. The present volume contains 53 of these contributions, mostly presented at the symposium as invited review papers. Several essential changes occurred since the previous meeting in 1987. In auditory neuroscience, recently developed methods opened new horizons in the investigation of the structure and function of the central auditory pathway. Methods like c-fos tracing techniques and monoclonal antibodies for neurotransmitters and their receptors, like the introduction of electrophysiological recording from brain slices have made possible new insights into the function of individual neurons and their interconnections, particularly in the cochlear nuclei and in the superior olivary complex. Integrative approaches towards understanding the central auditory function started to dominate in the field. It is not...
