# Principles of Endocrine Pharmacology

By John A. Thomas

Springer. Paperback. Book Condition: New. Paperback. 310 pages. Dimensions: 8.9in. x 6.0in. x 0.7in. The authors have provided an overview of the relationships between hormones that are physiologic constituents of the body as well as their pharmacologic use in replacement therapies and related endocrine dysfunction. Principles of Endocrine Pharmacology concerns itself with the therapeutic use of hormones, and hormone like substances, or drugs that can act either by suppressing or enhancing the metabolism of certain glands of internal secretion. Other drugs used for nonendocrine therapies can likewise affect the endocrine system. Endocrine pharmacology emerged in the early 1900s with the use of crude pituitary extracts. By the mid-1900s several investigators had isolated and begun to synthesize hormones or hormonelike substances. Recognizing the limited supply of hormones that could be obtained both from animal sources and human autopsy material, the search for so called hormone substitutes also began early in the 1900s. Recently, recombinant DNA technologies have been used to provide alternative therapeutic sources of human insulin and human growth hormone. Aside from insulin, perhaps no other use of hormonally-active substance is better exemplified by those drugs which affect fertility. The synthesis of an orally-effective steroid represented...
